CAREER DEVELOPMENT in VERITAS

The VERITAS Design Group has always prioritized the needs of its people because we believe that employees are the key source of our current and future success. Thus, the Career Development portfolio of VERITAS was formed early on to specifically focus on the task of attracting and retaining the best talent.

This portfolio is under the leadership of a Group Principal assisted by an Associate whose responsibility is to ensure that each aspiring professional employee in the group has a guided path to obtain their professional qualifications. This guidance is in the form of a structured and documented development plan whereby the various types of work experience are balanced to ensure the individual learns all aspects of professional service. Currently, the Principal responsible for the Career Development portfolio is Alif Arif Iskandar assisted by Associate Wong Ka Yee. They are supported by Human Resources Manager Erlianny Tekoh, Human Resources Executive Maisara Azmi and Admin Support Executive Sellorani Sellapan.

A key phrase in which we firmly believe is;

> “To prioritize the ‘Human’ in Human Resources.”

In 2013, VERITAS developed a professional development program for each vital operational role in the group. Then in 2017, we rolled out a comprehensive Talent Management Strategy (TMS) to ensure talented personnel are retained as well as to attract highly motivated individuals to join our company.

Career Development program activities at VERITAS include:

- ROAR (Road to AR) Program
- Structured Executive Training @ Asia School of Business
- Toastmasters Program
- Attending and Speaking at Exhibitions and Conferences

- General/Technical Training Programs and Incentives
- Other activities

ROAR (Road to AR) Program

The ROad to Ar. program was initiated in 2017 with the objective of encouraging VERITASians to take the Architect's Professional exam in Malaysia (LAM Part 3). The focus is on ensuring all VERITASians are familiar with the acts, by-laws and contracts relevant to the architectural profession and construction industry. This program includes discussions and knowledge sharing of the LAM Part 3 professional registration exam topics and the challenges faced in reality. Apart from LAM Part 3, the ROAR program also includes topics from each SBU (such as Planning, Landscape, Interiors, and Environmental consultancy) that all of VERITASians can learn from.

ASIA School of Business
in collaboration with MIT Sloan Management

STRUCTURED EXECUTIVE TRAINING @ ASIA SCHOOL of BUSINESS (ASB)

VERITAS has recently embarked on an external training arrangement with ASB. The ASB Executive Education Center's courses are designed to upskill rising professionals at VERITAS with short, accelerated courses. Each course is self-contained and crafted to provide VERITASians with the essential knowledge, skills and tools to navigate in today's complex world. The course content is developed by drawing on the rigor of founding parents - Bank Negara Malaysia and the MIT Sloan School of Business.

TOASTMASTERS PROGRAM

Do you want to practice public speaking, improve your communication, and build leadership skills?

VERITAS is actively involved in the Toastmasters Club Meetings (TCM). TCM is a platform where by professionals can polish their public speaking skills through a worldwide network. Through this program, VERITASians will imptove their speaking/communication skills, learn to better structure their presentations and incorporate tone and body language to truly engage with their audience.

EXHIBITIONS and CONFERENCES

It may seem like a big loss of productivity to any business if staff happen to be absent from the office because they are attending a conference. But at VERITAS we do it differently and definitely, it has been wise investment for VERITAS. We encourage VERITASians to network among other participants, build brand awareness, learn from the exhibition and conferences. Of course it also injects inspiration into the work culture.

GENERAL/TECHNICAL TRAINING PROGRAMS and INCENTIVES

Employees today are looking for companies that truly care and recognize their whole person. And

OTHER ACTIVITIES

We also believe in diversity and in creating a fun yet efficient working atmosphere. To achieve this goal, we not only focus on professional training but also on essential life development skills such as foreign language classes, leadership and management training, social and sports events, charity activities, and exciting staff retreats and study trips.

To sustain VERITAS as a world-class design practice we are committed to developing and attracting talented individuals from around the world. We value diversity and commitment to excellence which permeates all aspects of our DNA.

as the talent market becomes more competitive and employee retention becomes a top priority, personalized employee perks are more important than ever. The good news is that VERITAS has a program which subsidizes 75% of the costs of training and professional board membership fees.

To complete this story, we asked a few questions of our Career Development team: **VERITAS Principal Alif Arif Iskandar, Associate Wong Ka Yee**, and **Architect Fatin Shaza** (who recently sat for her PAM Part 3 oral exam). They shared their stories with **Komathi Ramakrishna (KR)**.

KR: Would you say VERITAS is inspiring for young architects and designers?

Alif: In VERITAS, we believe in excellence and do not subscribe to a specific set of aesthetics or "standards" details. Our approach has been site, Client and user specific. We value contributions from our young designers and in fact expect our junior staff to play a more hands-on role in the design process. This is rarely seen in the local big design firms in Malaysia where most design is controlled by few a director. Using this method will give confidence and sense of ownership of the project to our young designers and hopefully they will carry on the project to completion as they grow in VERITAS.

KR: As an Associate how would you educate young architects entering this field?

Ka Yee: The young architects would be exposed to various responsibilities in a multitude of projects. They will be in charge of different stages of the process from inception all the way to Final Accounts stage. I would usually keep track and monitor their progress frequently as well as guide them so they can perform in their tasks. The most effective way of educating talents has always been a 70% practical and experiential training. That is the only way they can learn and improve on their talent and skill sets.

KR: Congratulations on passing your Part 3 Oral exam! VERITAS has this special group that prepares our Architects for their Part 3 exam. Tell me about this program.

Fatin: It's called the ROAR, an after-work session twice a month that relates to AR topics that prepare new graduate architects as well as those who are planning to sit for the exams soon.

All the graduate architects are assigned an AR-related topic in throughout this program, in which they are required to research and present to other graduate architects. My topic was on Strata Title Act and Strata Management Act, and at the end of the session, there was a short discussion on the current application and issues of that topic within the architecture industry in Malaysia.

The RoAR sessions have helped me a lot in my studies, as the notes and presentations produced by other graduate architects are comprehensive and well-summarized. VERITAS has always been supportive of their staff pursuing Part 3, and I'm thankful for that support system as it has given me the extra push in taking my oral and written exams.

SPECIAL FEATURE 13

Essential design in facilities that encourage family bonding

Liveable spaces allow privacy when needed while encouraging togethernes

By **YANIKA LIEW** yanika.liew@thestar.com.my

WHETHER it is children or parents who have become increasingly isolated on their mobile devices, watching or surfing their favourite sites, concerns over family activities and bonding time have become more prevalent in this Internet of Things age.

However, there are a number of ways to facilitate interaction in the home. The built environment impacts social behaviour in many ways, whether directly or indirectly, and facilities specially designed for family bonding have increased in popularity.

"In general, common areas such as kitchen, dining, living, family and games room will encourage family bonding, however, it depends on the residential typology and size of the property," Veritas Architects' director Azril Amir Jaafar said.

These are areas that allow for increased interaction between family members. Not only do families have to put their digital devices down for a hands-on experience, but these are also where communal activities such as eating and playing can occur.

When it comes to differing housing types, some families may not be able to incorporate new rooms due to size or layout. Compact, high-density areas hinder socialisation, in comparison to larger areas with ample communal facilities, as those living in the area will not have to compete for spaces to work, study and indulge in leisure activities. However, well-designed housing facilitates interaction without being obstructive.

"The spaces and facilities should be more open for ease of interaction. Facilities and furniture that encourage face-to-face interactions will be useful rather than the electronic gadgets that limit physical communications," Azril said.

Pointing out that design choices are personal to the individual, and depend on one's culture and lifestyle, Azril noticed that such communal spaces could be filled with basic bonding gadgets like board games and other equipment of common interest to the family.

bonding, Ahmad noted that design had to be based on proximity. With a controlled entrance and a common area, residents will be able to have more chances to meet. If a design has many entrances, there is a possibility of not meeting each other even though they might be living in the same area.

An example would be having seating arrangements in a social petal pattern. The arrangement allows more interaction where sitting is arranged in a conversation circle. This is designed to bring people together, allowing for more eye contact and interaction.

"The same principle can be applied in the house in furniture arrangement, especially where families are expected to interact more, for example, the living, family hall and also dining room. The arrangement of the furniture in these should be in a social petal arrangement," Ahmad said.

When it comes to creating a supportive living environment, he also pointed to the concept of livable play.

A home is liveable if there is enough space for the number of people living

Common areas like the kitchens can encourage family bonding.

This is crucial in allowing more participants to continue engaging with each other, instead of having to pause conversations when moving between rooms. For busy parents, it will allow them to spend time socialising with not only their spouse, but their children when preparing a meal.

Ahmad pointed to features such as a pergola in the garden or benches, which represented a private place for them to interact comfortably for the family to sit down and enjoy the presence of people.

These are small changes in the layout that facilitate face-to-face interactions, which are important to sustain and develop relationships.

The balancing act

While open spaces are more and more necessary in homes, designers are aware of the need for privacy in multi-generational homes. The pandemic showcased that families living together still require privacy and space for themselves, places such as the bedroom are often sanctuaries for not just children, but also those living with their parents.

"The balance can be achieved through space planning, circulations and partitions that separate the spaces," Azril pointed out.

Spaces can be divided into categories of public, semi-public, semi-private and private spaces, Ahmad said. The most public space in the house is the lounge or the living room. Then there are semi-public spaces where the control is in a specified time, for example when one books a playing field, no one is allowed to use the space unless given permission.

For families that live in compact homes, booking semi-public spaces such as basketball and badminton courts will allow them to do more active activities with their family members.

"Then there are semi-private spaces like an office where only certain people are allowed to go in for a longer period and those who do not belong to that organisation need to ask or be invited to come in. This space provides some sense of belonging to that particular

"The spaces and facilities should be more open for ease of interactions," Azril said.

"For more interaction to happen then the plan of the house should adopt the open concept," Ahmad said.

On 8th August 2022, VERITAS Principal Azril Amir Jaafar was featured in the Star Property pullout in an article entitled "Essential Design in Facilities that Encourage Family Bonding." He spoke about liveable spaces which allow privacy when needed while encouraging family togetherness.

READ MORE

"Social planners believed that proper housing layout could help to build a strong bonding community. The idea is for these people to meet with each other frequently," University Putra Malaysia faculty of human ecology professor Prof Dr Ahmad Hariza Hashim said.

Socialisation and design

There are many ways in which a room can be repurposed to facilitate better relationships within the household.

For rooms and spaces to facilitate

together, allowing there to be space for the family to have privacy when they want, while also encouraging them to be together with others at their leisure.

"For more interaction to happen then the plan of the house should adopt the open concept, where there is no separation between the living room and the dining room and to some extent the kitchen," Ahmad said.

The closed concept is more formal and uses many walls to separate each room, however, Ahmad commented that a direct line of sight is meant for certain rooms like the living room and dining room, as well as some parts of the kitchen.

organisation where they have a place to go and do their work," Ahmad said.

"For families, this semi-private space is important, the family hall, for example, is a semi-private space where all family members can join in leisure activities together," he added.

The family hall differs from the living room, such that the former is for family members and the latter is relegated to receiving guests. When considering the layout of a house, harmonious living can only be achieved when members have a good mix of private space for themselves and communal public spaces for activities.

TO GATHER, TOGETHER

On 21st August 2022, the Options section of The Edge newspaper featured VERITAS Vice President Lillian Tay in an article entitled 'to gather, Together.'

BUSINESS & INVESTMENT WEEKLY
THE EDGE
MALAYSIA
Options
To gather, together
To gather, together
theedgemarkets.com

One of Lillian's recent projects; a 1960s house in Petaling Jaya has been converted into a space for community gatherings and exhibitions. Previously the property was used as a gallery by photographers for traditional black-and-white film exhibitions.

Lillian tore down and removed parts of the house and turned it into a "neutral vessel" for curated events and works of art. It is a space to meet and have conversations over food, arts, and activities.

MERDEKA MOOD AT VERITAS KUALA LUMPUR - JALUR GEMILANG

It is time to show your patriotism and raise the national flag throughout Merdeka month.

WHAT is MERDEKA?

Independence Day (Malay: Hari Merdeka, also known as Hari Kebangsaan or "National Day"), is the official independence day of Malaysia. It commemorates the Malayan Declaration of Independence of 31 August 1957, and is defined in Article 160 of the Constitution of Malaysia.[3] The day is marked by official and unofficial ceremonies and observances across the country.

BCI TOP 10 ARCHITECTS

2022 AWARD

VERITAS makes it to the top ten again!

BCI
ASIA
AWARDS
2022
MALAYSIA

We are proud to announce that VERITAS was chosen again by BCI Asia to be among the “top ten” architectural firms in Malaysia. This further confirms our status within the Southeast Asia design industry and we are looking forward to greater success in the coming years. VERITAS Principal, Syah Kamaruddin received the award at a dinner which was held at the Mandarin Oriental Kuala Lumpur on the 26th August 2022.

The BCI Asia Top 10 Awards have become an institution for architectural communities of Southeast Asia, China, Hong Kong and Taiwan. Being a BCI Asia Top 10 laureate is a coveted prize among architectural firms, symbolizing the extent of their contribution to the built environment.
