Shinjuku Park Tower
Completion: 1994
Height: 235m
Floors: 52

Featured Interview

VERITAS Japan LLC Principal Architect Hisaya Suzukawa

Tell us about yourself and your role at VERITAS Japan LLC.

My name is Hisaya Suzukawa, and I am the Principal Architect at VERITAS Japan LLC. I have been in the architecture industry for over 30 years, and I have had the opportunity to work on a wide variety of projects, from small residential homes to large commercial buildings. I am passionate about creating buildings that are both beautiful and functional, and I am always looking for new ways to push the boundaries of what is possible.

What inspired you to start VERITAS Japan LLC?

I have always been interested in starting my own business, and I saw an opportunity to create a company that could provide a unique and innovative approach to architecture. I wanted to create a company that was not afraid to take risks and that was always looking for new ways to improve the way we design buildings.

What are some of the challenges you have faced in your career, and how have you overcome them?

One of the biggest challenges I have faced in my career is the constant pressure to meet deadlines and budgets. It can be very difficult to balance the need for creativity with the need for practicality. I have overcome this challenge by developing a strong team of architects and engineers who are all committed to working together to achieve the best possible results.

What are your favorite projects that you have worked on at VERITAS Japan LLC?

I have been very fortunate to work on a number of projects that I am very proud of. One of my favorites is the Shinjuku Park Tower, which was completed in 1994. This project was a challenge because it was located in a very dense urban area, but we were able to create a building that is both beautiful and functional. Another project that I am very proud of is the Yokohama Landmark Tower, which was completed in 1993. This project was a challenge because it was a very tall building, but we were able to create a building that is both safe and efficient.

What do you see as the future of architecture in Japan?

I believe that the future of architecture in Japan is very bright. There is a growing demand for sustainable and energy-efficient buildings, and I think that architects will play a key role in meeting this demand. I also think that there is a lot of potential for new technologies to be used in architecture, such as artificial intelligence and virtual reality. I am excited to see what the future holds for architecture in Japan.

What advice would you give to young architects who are just starting their careers?

My advice to young architects is to never stop learning. The field of architecture is constantly changing, and it is important to stay up-to-date with the latest trends and technologies. I would also advise young architects to be passionate about their work and to never give up on their dreams.
