A VERITAS DESIGN GROUP PUBLICATION

Greetings to all our Readers!

In this month's e-news we are delighted to feature 5 of our outstanding projects that have recently won design awards from the Malaysian Institute of Architects (PAM) and the Malaysia Green Building Council (MGBC). Design awards are the profession's way of recognizing excellence in design, and VERITAS is proud to be a regular recipient of such accolades.

We hope you enjoy this month's VERITAS e-news! And please don't hesitate to contact us if you would like to know more about any of the stories featured here.

Malaysian Institute of Architects (PAM) Awards

The PAM Awards is the premier annual award for architecture in Malaysia which recognizes the contributions made by architects in terms of design quality for the built environment. It is likened to the Academy Awards of the film industry and in this respect, awards are bestowed on the best works which are recognized by peers in the architectural profession.

In recognizing that the PAM Awards needed to improve and achieve greater public recognition, higher standards and benchmarks were required.

Hence, the format of the Aga Khan Award model was adopted together with the introduction of the five-juror system, both locally and internationally selected and headed by the convener of the award team. There are also technical reviewers who will answer any pertinent queries required by the jurors.

Malaysia Green Building Council Awards

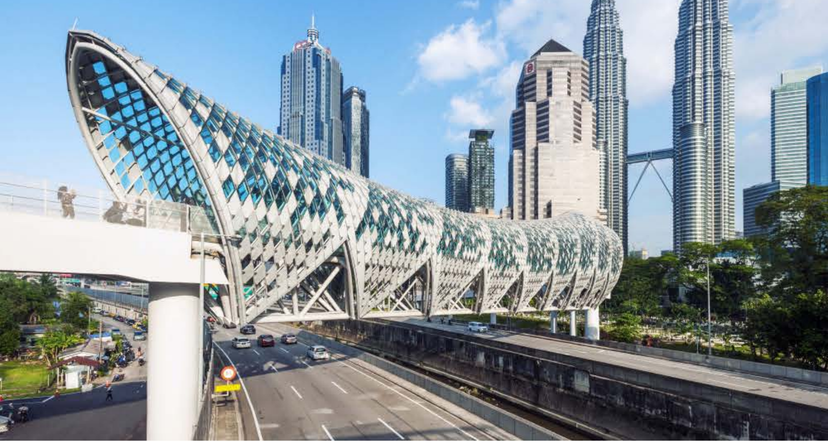
The Malaysia Green Building Council (MGBC) was formed in May 2007, when a group of consultants, academics and representatives from the building industry met to initiate a non-profit organization to promote sustainable buildings in Malaysia.

The MGBC is supported by the professional, industrial and government sectors.

It is well poised to lead our building industry in embracing responsible measures that would help realize energy savings, water conservation, a healthier indoor environment, better public connectivity, recycling of valuable resources and provision of greenery in developments.

Saloma Link

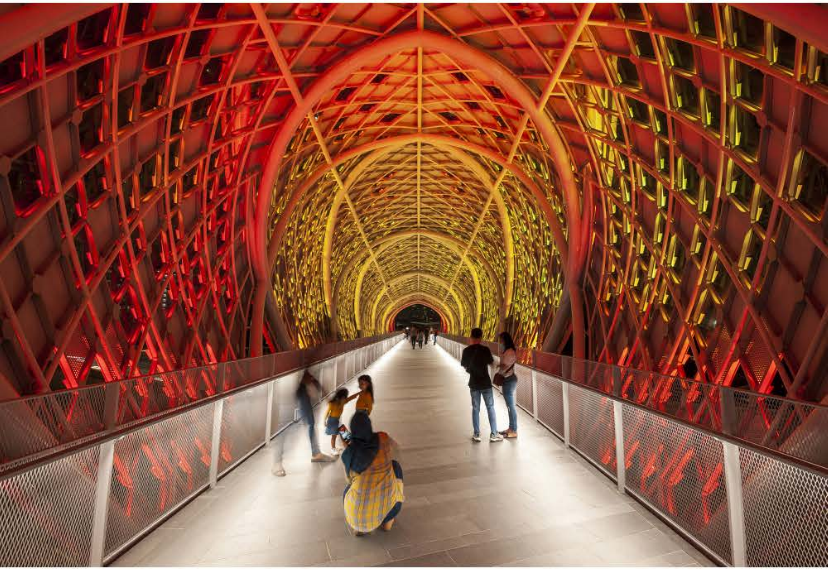
The Saloma Link is a pedestrian bridge that connects Kampong Bharu, the traditional Malay enclave dating back to late 19th century and the Kuala Lumpur City Centre (KLCC), the modern cosmopolitan Central Business District (CBD), formerly separated by the Sungai Klang and the six-lane AKLEH highway. It re-established historical connection between Jalan Ampang and Kampong Bharu, among the prominent landmarks that form Kuala Lumpur.



Bridging the different communities and culture across the Klang river and making KL more pedestrian friendly

Inspired by the Sirih Junjung, a matrimonial gift hand-crafted from sireh leaves, traditionally offered in Malay weddings as a symbol of unity, the Saloma Link represents a ceremonial gesture that embodies the bond between two important enclaves in the city: the affluent Kuala Lumpur City Centre and the traditional village of Kampong Bharu.

The unique shape of the facade panels reflects the sunlight to give the bridge distinctive character.



The bridge is transformed into a vibrant public space at night.

It is aimed to celebrate and encourage pedestrian mobility in the city as part of the sustainable urban design initiatives. Moving towards that objective, Saloma Link also connects the missing link towards a more complete city-wide pedestrian path network in the city. This project recently won Gold for the PAM Awards 2022 under the category of Special Projects.

Bridging the different communities and culture across the Klang river and making KL more pedestrian friendly.

Angsana by Banyan Tree, Penang

The design of the Angsana Resort celebrates the experience of the meeting of the Forest and the Sea.

The timber and steel pavilion hovers over the pool framing views to the sea and the hills beyond

The narrow 3.5-acre site is sandwiched between the majestic, forested slope of Penang Hill and the pristine bay of Teluk Bahang where remnants of the old Malay fishing village community still bring in their daily catch each morning in their weathered wooden boats near the abandoned timber jetty.

Peranakan motifs on the glass screen at the portal entrance

Interlocking glass screen promotes natural ventilation while protecting from rain

Inspired by the tenacity of the Malay fishing community and their closeness with the outdoors, the hotel and service apartments are laid out to allow a constant experience of the outdoors and the sea, with naturally ventilated circulation and common areas connecting the hotel and serviced apartment block.

Filtered natural light and shadows cast from the glass screen creates rich play of textures at the lobby

The project recently won silver for the PAM Awards 2022 under the category of Commercial Mixed Development.

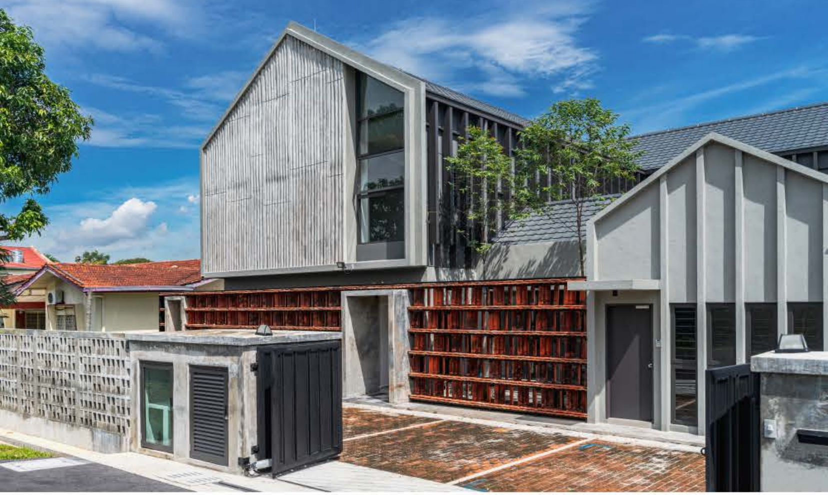
Women’s Aid Organisation (WAO) Shelter Home

The WAO Shelter Home is a Corporate Social Responsibility project to rebuild a 1960s house that had been struck by lightning and partly destroyed by fire. The house had deteriorated and needed extensive rebuilding. The project is the first childcare center with green certification achieving the highest Platinum score to date. The house design focuses on passive and active cooling strategies, recycled materials and optimized use of renewable energy.



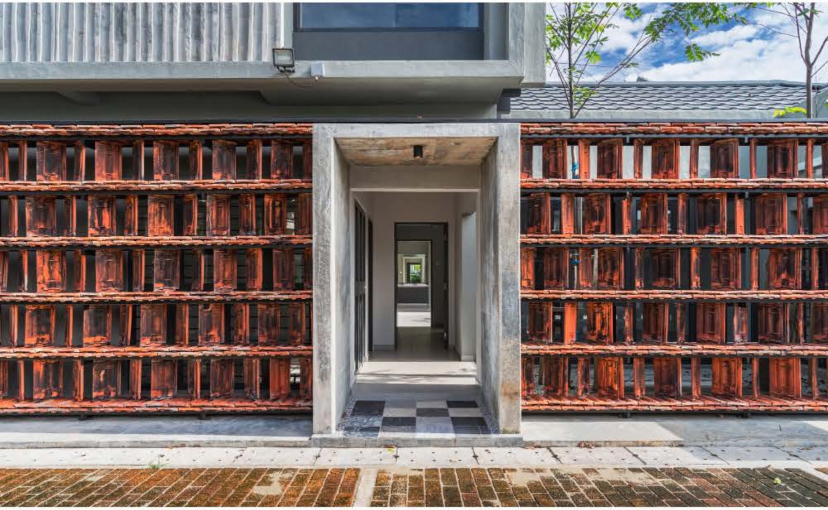
View from the entrance gate

To reduce the detrimental impact on occupant health from finishes emitting internal air pollutants, low VOC paints and environmentally friendly adhesives were used for interior surface finishes. Also, certified green label products were used such as lightweight wall panels and mineral roof tiles.

Transitioning silhouettes

Small amphitheater space at the backyard

With the limited budget of approx. RM180 p.s.f, the new shelter home reused various recyclable materials such as rejected porcelain and sample marble tiles from developers, excess stock sanitary ware and fittings from suppliers. Burnt roof tiles from the fire-damaged house which were repurposed and up-cycled to create a new protective interior screen wall.



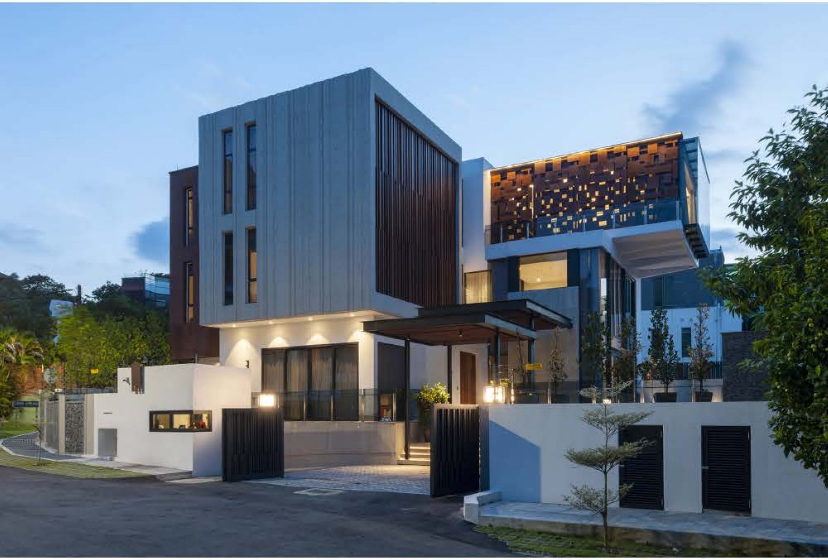
Hand-crafted perforated wall constructed by the old roof tiles from the burnt house

The project recently won 2 PAM Awards 2022 in 2 different categories silver under the category of Adaptive Reuse and commendation under Sustainable Goal development category.

Read more

Corten House

The Corten House is a 3-storey residence with a L-shaped layout embracing the landscape garden and swimming pool. The house is formed by a series of boxes that allows natural lighting to penetrate the interior and create privacy. The interlocking volumes anchored by the stairs connect the spaces within the house. A semi-basement car park worked within the slope, creating a welcoming pedestrian-friendly entrance. Lush outdoor landscaping softens the external environment, giving a sense of balance and harmony.



Overall Dusk View of Corten House with back-lit corten screen

The front façade features a two-storey striated fair faced concrete finish, in contrast with corten steel cladding on the Southwest. The foyer is welcomed by a featured concrete wall with shadows from the timber-look louvered steel roof patio. The elevated landscape garden and swimming pool are framed by the interlocking massing of the house and lush greeneries.

Main Entrance overlooking towards open landscape garden with swimming pool

Cantilever family skypod screened by collage of rectangular corten panels

This project received a commendation award for the PAM Awards 2022 under the category of Single Residential.

Family skypod overlooking to the vertical timber screen facade

International School of Kuala Lumpur (ISKL)

Located on a 26-acre site in Ampang Hilir, the campus for the International School of Kuala Lumpur was an opportunity to bring all three parts of ISKL (elementary, middle and high school) back together in one location in a new space fully appropriate to the school's unique identity.

In keeping with green building concepts, ISKL's 'green' designed facility is the first Malaysian school to achieve Platinum certification from Green Building Index (GBI).

ISKL is the lowest carbon-footprint international school in Malaysia and it proposes an immersive educational experience where environmentally sustainable practices are incorporated into students' daily lives from early childhood. The building's technology and settings promote responsible human behavior towards the use of space and energy, which subconsciously becomes part of the learning experience. This way, our future generations' minds are seamlessly trained and educated on the importance of protecting and preserving the environment. The project recently won the Malaysia Green Building Council (MGBC) Best New Green & Sustainable Academia Building.

FEATURED INTERVIEW (CAKAP-CAKAP CORNER)

This month we would like to ask a few questions to the team members of the above award-winning projects: VERITAS Environment Principal Kenny Wong, VERITAS Architect Design Principal Aina Zuber, VERITAS Associates Farah Yusof and Choong Wei Li, and Architect Michael Tan.

VERITAS Architect Design Principal
Aina Zuber

Aina & the Angsana Team at Angsana Teluk Bahang

KR: Having won the Silver award under the Commercial Mixed Development for the Angsana Resort by Banyan Tree at the recent PAM Awards 2022, how would you leverage this accomplishment to influence others and how might that impact your career?

Aina: Winning the award is definitely rewarding and helps me to build my portfolio. Also gives me a new great deal of energy to do better in my next project.

VERITAS Associates
Farah Yusof

Farah Yusof at Saloma Link - 2019

KR: Congratulations on winning the Gold Award for the Saloma Link! What was your secret to winning this award?
Farah: Ha ha ha… for me it's all about allowing time to develop the design and of course find the right client for us to be creative.

KR: Tell me a little about working on this dual award-winning project; the Women's Aid Organisation Shelter home.
Wei Li: This is definitely the best reward for a pro-bono project by VERITAS. The project has demonstrated an example of achieving the best solution for both design and green approach while maintaining at a very limited budget.

Undeniably, the WAO Shelter Home is very beautiful, upcycled yet aesthetic. The Home is profound and whimsical.

VERITAS Associates
Choong Wei Li

Chong Wei Li at WAO Shelter Home

KR: It can be very challenging to work on a Private Residence- the Corten House project; how did you deal with the challenges?
Michael Tan: I believe Architecture exists to improve people's quality of life through a well-designed built environment. Private Residence is interesting because we have the privilege to understand the Client in person. The Client may have wild ideas and we as the architects have the responsibility to assist them to realize their dream home at the same time ensuring the project to complete within the timeline, the cost is within the budget, and technical and safety requirements comply. I personally enjoy getting to know people in person and taking this opportunity to explore ideas of creating experiential spaces specifically for them. Because at the end of the day, Architecture is about People and Environment.

Architect
Michael Tan

Michael Tan at Corten House

KR: The International School of Kuala Lumpur has received numerous awards locally and Internationally, and again from MGBC recently. What is it that makes this project stand out from all other sustainable projects?
Kenny: ISKL is a low carbon footprint school - first GBI Platinum rated international school in Malaysia. This is the green architecture we desperately need.

VERITAS Environment Principal
Kenny Wong

Vertical Cities

On 29th June 2022, VERITAS Founder and President, Ar. David Mizan Hashim gave a talk at Vertical Cities Conference held at Pan Pacific Hotel, Singapore and organized by Marcus Evans. His talk was entitled, *"SkyScapes: Exploring the Future Paradigm of Living in the Sky."*

David explained the future of living in super high-rise buildings, which will eventually be the reality in many of our densest cities.

He also shared several case studies of projects by VERITAS to illustrate the many design solutions and proposals that are emerging to respond to this opportunity.

Malaysia Green Building Council (MGBC) Award

VERITAS is proud to announce that it has received the Malaysia Green Building Council (MGBC) award for the Best Sustainability Leadership as well as their award for Best New Green and Sustainable Academia Building (for the International School of Kuala Lumpur) on 1st July 2022 held at the Westin Hotel Kuala Lumpur. VERITAS Vice President Lillian Tay and Principal Ng Yiek Seng attended the gala dinner to receive the awards.

Annual Dinner in conjunction with Leadership in Sustainability Awards 2022

Dinner in conjunction with Leadership in Sustainab

ISKL is also the first school in Malaysia to achieve the platinum Green Building Index (GBI) rating for sustainable design. It is also the Gold Award winner for the education category by the Malaysian Institute of Architects (PAM) and the Cityscape Award under the sustainable project category in 2019.

VERITAS has been honored with many awards on sustainability, both local and international. Congratulations to the team who worked on this impressive project!

Chancellory Building, USM
VERITAS
design group

VERITAS Design Group and the University Science Malaysia (USM) - School of Housing Building and Planning signed a Memorandum of Understanding on 6th July 2022, at the Vice Chancellor's Office in Penang.

This MOU is the first signed by an architectural and design firm to promote education among students at USM. The MOU's goal is to promote, build, and grow the education facility's research, education, and training activities.

The MOU will foster collaboration between professional practice and academics, since real-world learning combined with theory would be extremely beneficial to students. This partnership would almost certainly provide early exposure to possible job prospects as well as valuable insight into current design and technology trends.

It often happens that whenever most of us feel demotivated we look up to the life stories of various inspiring individuals. Their stories bring positive change in many people's lives as their motivational force keeps hopes alive and also increases productivity. One such person whose life journey can act like a beautiful lesson for most of us is Ar. Lillian Tay, Vice President of the VERITAS Design Group.

With all these years of hard work and dedication and under the able leadership of Ar. Lillian Tay, VERITAS has reached phenomenal heights. She has been felicitated with numerous awards and again on 14th July, she was honored with the *"Distinguished Women Entrepreneur Lifetime Achievement Award"* at the World Women Economic and Business Summit 2022 gala dinner.

Affordable luxury - a possible oxymoron

Facilities like the swimming pool can be classified as a luxury item.

Luxurious living does not need to be expensive

By **HO JIA WEN**
jiawen.ho@thestar.com.my

AS we enter a post-pandemic era, home buyers are more aware of their living spaces and are seeking a better home life. Although many home buyers now have an increased taste for exquisite living, the fact that most luxury items are highly-priced, thereby increasing the price of homes once such opulence products are added.

So buying a home that is both luxurious and affordable seems like a double win. Strange as it may sound, luxury homes need not put a hole in your pocket. Luxury and affordable may look contradictory but it is a category that is becoming more prominent in the market.

However, it is important to note that luxury living can differ for each individual as it is a matter of preference for those from different backgrounds or income groups. The perception of luxury by someone from a B40 group and another from an M40 group can be very different.

"For example, a swimming pool may be a standard requirement for some, but for those moving from a place without pool access, it will be an upgrade or even a luxury to have a pool in their living quarters," said Knight Frank executive director Amy Wong.

However, there are features that most will agree to be luxurious living. A property in an accessible and premium location along with high-quality facilities would be considered luxurious.

Moreover, beautiful architecture, large spaces, quality finishes, fittings and fixtures add to the entire luxurious ambience of the property, according to Association of Valuers, Property Managers, Estate Agents and Property Consultants in the Private Sector president Michael Kong Kok Kee.

Yet luxurious living is not only reserved for those in higher income groups. "There are some developments that can be classified as affordable luxurious homes," said Kong.

Another example is micro-apartments in upscale condominiums that have high-quality finishings, an array of common amenities and good security for all within a range of RM600,000, according to Wong. At this price range, it is within reach of the upper M40 group.

For high-rise properties, luxurious living can be made possible through a wide range of well-maintained communal facilities that serve the needs of residents. Doorstep facilities such as swimming pools, children's playground and gymnasium which are features of many high-rise properties do provide a semblance of luxury. Cost for other luxurious amenities like a spa can be kept low by outsourcing external operators for maintenance, commented Wong.

"However, to have luxury and a lower price tag simultaneously means trade-offs would be made because all things come with a cost," said Kong. Most affordable luxurious properties would be found in high-rise units, meaning smaller places, where only couples or small families can fit. Moreover, more home buyers and investors are now seeking premium properties. Developers will find it challenging to keep prices low while providing luxurious amenities.

Certain architectural designs can be implemented to allow the property's luxurious elements to shine while keeping costs low. "Luxury is elegance and extreme comfort, and it is relative and a matter of perception," said Veritas Design Group principal and director Alif Arif Iskandar Abd Wahab. In both interior and architecture designs, there are three considerations that Alif suggests

"Developers will find it challenging to keep prices low while providing amenities that are luxurious," said Kong.

"Not many individuals can afford premium luxury, there is a gap in the market for property that is both affordable and luxurious," said Wong.

"Luxury is elegance and extreme comfort, and it is relative and a matter of perception," said Alif.

On 8th July 2022, VERITAS Principal Alif Arif Iskandar was featured in the Star Property pullout in an article entitled "Affordable Luxury - a Possible Oxymoron" article.

Affordable luxury is an often-used term by local developers nowadays to give an edge to their marketing, and Alif shared his insight with the readers on the potential mis-understanding of such labelling.
